I have been an xm subscriber for over a year and enjoy the quality and variety of their programming. I tend to listen to musical genres not available on regular radio, such as alternative country and bluegrass, and enjoy being able to hear news in the car from FoxNews and CNN. These typees of options are not available on regular FM or AM redaio. I also enjoy listening to my music commercial free, definitely not an option on commercial radio. The only thing I miss is the traffic that commercial radio provides occassionally and generally poorly. It would be ridiculous to bar xm from offering this service. It in no way will alter my radio listening habits. I never listen to commercial radio anymore regardless of the ability to hear traffic. It would be an additional bonus to be able to hear it however. The move to satellite radio is due to the incredibly poor programming offered by commercial radio and they have no one to blame but themselves. Thank you.
